

1. Introduction

1.1 Purpose

The purpose of this SRS is to describe the functional and non-functional requirements of “**Sutraty**”, an online boutique platform where business owners can display and manage items, and customers can browse, filter, and purchase items.

This document is intended for:

- Product owners
- Developers
- Testers
- UI/UX designers

1.2 Scope

“Sutraty” provides:

- An attractive landing page to attract visitors
- A customer interface for browsing, filtering, and purchasing items
- A business owner dashboard for managing inventory and transactions
- Management of returned items and completed sales
- Clear and categorized navigation for both business owners and clients

The system consists of:

- A Frontend web application
- A Backend API
- A database for items, users, and transactions

2. Overall Description

2.1 Product Perspective

“Sutraty” is a standalone ecommerce platform tailored for some small business owners. It contains two main environments:

1. **Public User Interface** (for customers)
2. **Business Owner Dashboard** (admin-level interface for shop owners)

2.2 User Classes

User Type	Description
-----------	-------------

Client/Customer	Browses items, filters results, views details, purchases items
Business Owner	Manages items, prices, returned products, transactions
System Admin (optional)	Handles platform maintenance

2.3 System Environment

- Web browser interface
- Database storage (SQL)
- Secure backend server

3. Functional Requirements

3.1 Client Requirements

FR-1 Viewing Items

“As a client of “Sutraty”, I want to see all available items.”

- The system shall display all active items on the platform.
- Items shall include basic information (name, image, price..).

FR-2 Filtering Items

“As a client of “Sutraty”, I want to filter through available items.”

- The system shall provide filtering options (category, price).
- The system shall update results dynamically based on filters.

FR-3 Viewing Item Information

“As a client, I want to know all the needed information about items (size, colors, etc.)”

- The system shall show detailed item information, including:
 - Sizes
 - Colors
 - Photos
 - Price
 - Availability

FR-4 Purchasing Items

“As a customer, I want to buy the items that I like.”

- The system shall allow users to add items to a shopping cart.
- The system shall process purchases through a checkout flow.

- The system shall generate confirmation for the purchase.

3.2 Business Owner Requirements

FR-5 Landing Page Appeal

“As a business owner, I want to have a catching landing page.”

- The system shall provide a visually appealing landing page layout.
- The design shall highlight featured items or promotions.

FR-6 Dashboard Management

“As a business owner, I want to have a dashboard where I can manage my added and removed items.”

- The system shall provide a secure dashboard for business owners.
- The dashboard shall show item lists and allow editing/deleting items.

FR-7 Add New Items

“As a business owner, I want to add new items to sell.”

- The system shall allow owners to upload new items with details:
 - Photos
 - Description
 - Size
 - Color
 - Price
 - Quantity

FR-8 Navigation Structure

“As a business owner, I want to have a header which makes navigation clear as well as categorized navigation.”

- The system shall include a responsive header with categories and dashboards shortcuts.
- The system shall separate client navigation from business-owner navigation.

FR-9 Manage Returned Items

“As a business owner, I want to manage the returned items.”

- The system shall track returned items.
- The dashboard shall allow marking items as returned and updating stock.

FR-10 Manage Purchased Items

“As a business owner, I want to manage bought items.”

- The dashboard shall display a list of purchased orders.
- Owners shall be able to update order status (Processing, Shipped, Delivered).

FR-11 Store Transactions

“As a business owner, I want to store my transactions.”

- The system shall maintain a transaction history for each purchase.
- The system shall allow exporting or filtering transaction records.

4. Non-Functional Requirements

4.1 Performance Requirements

- Item list must load in less than **2 seconds**.
- Filtering results must appear in less than **1 second**.
- Dashboard pages must load in less than **3 seconds**.

4.2 Security Requirements

- Business owners must authenticate before accessing the dashboard.
- Passwords must be encrypted.
- Checkout must use HTTPS encryption.
- Roles (client vs business owner) must be enforced.

4.3 Usability Requirements

- Clean and intuitive UI.
- Mobile-responsive design.
- Clear category navigation.

4.4 Reliability Requirements

- The system should have **99% uptime**.
- Transactions must not be lost in case of network interruption.

5. System Models

5.1 Use Case Diagram

6. Acceptance Criteria

- Clients can browse all items and filter them successfully.
- Each item displays complete information.
- Business owners can add/remove/update items from the dashboard.
- Purchases appear instantly in the business owner dashboard.
- Returned items can be tracked and updated.
- Transactions are stored correctly and accessible.
